

## ATTACHMENT B

### Amendments to the Claims

*Following herewith is a complete listing of the claims, including a marked copy of the currently amended claims.*

1. (Currently Amended) A method for producing a web page; said method comprising the steps of:

positioning at a desired location at least one tangible object representing at least one user interface element on a tangible background medium to create a desired web page appearance;

generating a scanned image of the desired web page appearance; and  
executing a program of instructions using said information handling system, the program of instructions:

~~receiving an image, said image being produced through optical scanning of a medium, said medium being manipulated by a user;~~

~~identifying the at least one representation of tangible object at least one user interface element included in the scanned image;~~

~~creating at least one user interface element corresponding to the at least one tangible object identified in the scanned image; and~~

~~formatting the an executable web page to include having the at least one user interface element positioned in correspondence with the positioning of the at least one tangible object on the tangible background medium so that the executable web page has the desired web page appearance.~~

~~corresponding to the identified representations of the at least one user interface element.~~

2. (Original) The method as described in claim 1, wherein the at least one user interface element includes at least one of a label, text box, scroll bar, button, group box, slider control, link and predefined element.

3. (Currently Amended) The method as described in claim 1, wherein the at least one tangible object ~~representation of the at least one user interface element~~ is identified by at least one of color, shape, texture, size, border style and optical indicia.

4. (Canceled)

5. (Currently Amended) The method as described in claim 1, wherein the program of instructions further: comprising prompting  
prompts a user to enter additional data of a particular type related to the identified at  
least one user interface element tangible object; and  
receives data of said particular type from said user; and  
wherein said data is used by said program of instructions in creating said at least one  
user interface element.

6. (Currently Amended) The method as described in claim 5, wherein the ~~additional information data~~ is entered by at least one of scanning, typing and data download.

7. (Canceled)

8. (Currently Amended) The method as described in claim ~~7~~1, wherein the tangible background medium is a ~~tangible medium~~ selected from a group consisting of paper, plastic sheets, and a magnetic medium.

9. (Canceled)

10. (Currently Amended) The method as described in claim ~~9~~1, wherein the ~~object is a~~  
at least one tangible object is selected from a group consisting of a sticker, a magnetic object, and a removable plastic object which is subject to electrostatic forces.

11. (Currently Amended) A computer program product readable medium comprising:  
~~a computer useable medium~~ including computer usable program code for performing a  
method for performing ~~a method for designing~~ formatting an executable a web page, the  
computer program, including the method comprising the steps of:

~~computer usable program code for receiving an image, said image being produced~~  
through optical scanning of a tangible background medium and at least one  
tangible object positioned at a desired location on the tangible background  
medium to create a desired appearance of the web page, said medium being  
~~manipulated by a user;~~

~~computer usable program code for identifying the~~ at least one tangible object  
~~representation of at least one user interface element included in the~~ scanned  
image; and

~~computer usable program code for formatting an executable~~ the web page to include  
at least one user interface element corresponding to the identified at least one  
tangible object ~~representations of the at least one user interface element and~~  
positioned in correspondence with the positioning of the at least one tangible  
object on the tangible background medium to produce the desired appearance of  
the web page.

12. (Currently Amended) The computer program product readable medium as  
described in claim 11, wherein the at least one user interface element includes at least  
one of a label, text box, scroll bar, button, group box, slider control, link and predefined  
element.

13. (Currently Amended) The computer program product readable medium as  
described in claim 11, wherein the at least one ~~representation of tangible object~~ the at  
~~least one user interface element~~ is identified by at least one of color, shape, texture,  
size, border style and optical indicia.

14. (Canceled)

15. (Currently Amended) The computer ~~program-product~~ readable medium as described in claim 11, wherein said method further comprising comprises prompting a user to enter ~~additional data~~ of a particular type based on the identification of the at least one tangible object. ~~related to the at least one user interface element.~~

16. (Currently Amended) The computer ~~program-product~~ readable medium as described in claim ~~48~~15, wherein the ~~additional information data~~ data is entered by at least one of scanning, typing and data download.

17. (Canceled)

18. (Currently Amended) The computer ~~program-product~~ readable medium as described in claim ~~47~~11, wherein the tangible background medium is ~~a tangible medium~~ selected from a group consisting of paper, plastic sheets, and a magnetic medium.

19. (Canceled)

20. (Currently Amended) The computer ~~program-product~~ readable medium as described in claim ~~49~~11, wherein the ~~object is a~~ at least one tangible object is selected from a group consisting of a sticker, a magnetic object, and a removable plastic object which is subject to electrostatic forces.

21. (Currently Amended) An information handling system, comprising:  
a processor for executing a program of instructions on the information handling system;  
a scanner coupled to the processor; and  
a memory coupled to the processor for storing the program of instructions executable by said processor;

wherein the program of instructions ~~configures~~ causes the information appliance handling system to:

~~receive an image, said image being produced through optical scanning of~~  
operate said scanner to generate a scanned image of a tangible  
background medium, said medium being manipulated by a user and at  
least one representation of at least one user interface element positioned  
at a desired location on the background medium;

identify the at least one representation of at least one user interface element  
~~included in the scanned image;~~

prompt a user to enter data of a particular type corresponding to the at least  
one representation of at least one user interface element identified in the  
scanned image;

receive data of said particular type from said user;

create at least one user interface element using said data; and

~~format the~~ an executable web page to include including the at least one user  
interface element ~~corresponding to the identified representations of the at~~  
~~least one user interface element positioned in correspondence with the~~  
positioning of the at least one representation of at least one user interface  
element on the tangible background medium, such that the executable  
web page has a desired appearance.

22. (Original) The information handling system as described in claim 21, wherein the at least one user interface element includes at least one of a label, text box, scroll bar, button, group box, slider control, link and predefined element.

23. (Original) The information handling system as described in claim 21, wherein the at least one representation of at least one user interface element is identified by at least one of color, shape, texture, size, border style and optical indicia.

24. (Canceled)

25. (Canceled)

26. (Currently Amended) The information handling system as described in claim ~~25~~21, wherein the tangible background medium is a ~~tangible medium~~ selected from a group consisting of paper, plastic sheets, and a magnetic medium.

27. (Original) The information handling system as described in claim 21, wherein the at least one representation of the at least one user interface element is associated with an object capable of being positioned on the medium.

28. (Original) The information handling system as described in claim 27, wherein the object is a tangible object selected from a group consisting of a sticker, a magnetic object, and a removable plastic object which is subject to electrostatic forces.
